List of Figures

1 Introduction

RICOH UK Products Ltd is a leading provider of products and goods, focusing on toner printing and recycling. Current production warehouses are located in the UK, with a large number of products being shipped to customers across the country and europe. The company is looking to improve its production and distribution processes by transferring existing systems and infrastructure closer to their targeted audience. This will enable better tracking, management of inventory and improved communication between different RICOH organisations. However, as a result, RICOH UK Products Ltd will no longer hold responsibility for the production of toner and will require new strategies to support business continuation.

2 Transformation Necessity

2.1 Problem

RICOH family leaders have identified that the current production and distribution processes are not efficient enough to meet the growing demand for their products. As a result, the company is transferring its existing production infrastructure to RICOH FR in France.

2.1.1 Situation

This drastically impacts RICOH UK Products Ltd, as large amount of employees and project work will be significantly reduced, resulting in a reduction of operational capacity and financial resources.

2.2 Requirements
